

Junior Front-End Task

This exercise is about how you structure UI code, not how fast you push pixels.

The designs

- <https://www.figma.com/design/9uEXXi6aXiZxy3fJKihPhm/Untitled?node-id=0-1&t=nBsF2Lk1W5nQEII6-1>

Same screen at two widths. All content comes from the attached dashboard-data.json.

Stack

React or Angular. Whichever you're stronger in.

Plain CSS. No Tailwind, no Bootstrap, no component libraries. CSS Modules or Angular's scoped styles are fine - they're still plain CSS.

Be ready to explain any line of your code in a follow-up call.

What we're looking for

Reusable components. The Figma file is a designer's file. The same visual block is copied by hand over and over, and the courses table is built as four vertical columns instead of rows. That isn't how it should be built in code. Working out the component structure is your job.

Documentation and commenting.

- A short block at the top of each component saying what it is and where it's used
- Documented props and inputs
- Inline notes where a decision isn't obvious from the code

Not assessed

- **Pixel accuracy.** Close is fine. Consistent spacing beats exact spacing.
- **Assets.** No images provided - use placeholders or export from Figma file if you know how.
- **Backend, auth, routing, persistence.** None of it.

Submitting

A GitHub/GitLab link, or a zip without node_modules.

Your README should have:

- Install and run steps
- Questions you'd ask the designer. List what you spotted and what you assumed.
- What you'd do next
- Roughly how long you spent
